How You Can Make Money With Free Traffic Guide By Giving It Away For Free

Hello honorable reader of Free Traffic Guide!

Sit cosy in your chair or sofa: finally you found a guide that will give show you an easy-to-understand picture about successful online business.

Today everybody understands that targeted web site traffic is vital for any online business. If you want to get targeted web site traffic, you must KNOW strategies, techniques and tips on how to do it. Free Traffic Guide gives you 9 chapters jam packed with time-proven useful information about web site traffic, how to get it and how to use it.

LEARN from 9 chapters of Free Traffic Guide:

- how to get free targeted traffic to your web site
- how to find partners who will help you to promote your web site
- how to increase your Page Rank with search engines
- how to convert web site visitors into loyal customers
- how to attract the attention of your web site visitors
- how to make them return to your web site every day
- how to track the effectiveness of your advertising campaigns
- how to find what brings losses and profits on your web site, before suffering these losses

AND MUCH, MUCH MORE.

But before you start reading Free Traffic Guide, you must know some important things about it.

On the next page you will see how Free Traffic Guide will not only give you useful knowledge, but it will also show you how to get huge online publicity for your web site (or resources you are promoting) and how to turn Free Traffic Guide into you personal source of income.

[Get Free Targeted Web Site Traffic With Free Traffic System](#)

Free Traffic Guide Goes With FREE Distribution Rights

You can give this guide to anyone: to your clients, to your prospects, to the forum members, to your friends and colleagues.

You can give Free Traffic Guide as a free bonus to your product/service.

You can put it into autoresponder on your web site and grow your mailing list with people who enter their name and email to get Free Traffic Guide materials.

You can send it as follow up, post on your web site page, do anything you wish.

BUT!

There are two rules about Free Traffic Guide distribution:

1. You CANNOT sell or resell Free Traffic Guide. Even at 1 cent price. Free Traffic Guide is aimed for FREE distribution only!

2. You CANNOT erase or make any changes in the 'Resource Box' text and its position inside Free Traffic Guide chapters.

You Can Make \$\$\$ With Free Traffic Guide Distribution

Free Traffic Guide cannot be sold, as you know from the rules above. But still you can make money with it, distributing the materials to your contacts, prospects and clients.

You get possibility to make money with Free Traffic Guide when you register as our affiliate. Registration is 100% FREE, but it gives you a real opportunity to make huge money.

After you are registered as our affiliate, we will send you the URL where you can rebrand your copy of Free Traffic Guide and put your web site URL, URLs of other programs you are promoting or wish to promote in future and your affiliate link that you get in Free Traffic System affiliate program.

This is a viral Internet marketing tool that will give you huge publicity in Internet for free. All the people that will get a rebranded guide from you can give it to their contacts and their contacts can give it to their contacts. So your promotion turns into a virus. More and more people will see your web site URL, the URLs of programs you promote and will click your affiliate link.

This tool will be promoting you and your offers forever. As long as Internet connection exists on this planet, your web site gets free promotion.

But this is not enough. We promised that YOU will get money. This is easy.

Each time any of your clients, or contacts of your clients, or contact of contacts of your clients click the affiliate link and buy Free Traffic System, YOU WILL GET AFFILIATE COMMISSIONS in our 2-tier affiliate program. LIFETIME!

You can pass the rights to your affiliate link to your children, grand children, and the link will be brining them commissions. :))

More and more.

So, if you want to make money by giving away Free Traffic Guide for free, join the Free Traffic System affiliate program at no cost and rebrand your own copy of Free Traffic Guide with the URLs you need.

[Click Here to Join the Free Traffic System Affiliate Program for FREE!](#)

And now you know everything to start reading Free Traffic Guide.

HAVE A NICE ONLINE EXPERIENCE!

[Get Free Targeted Web Site Traffic With Free Traffic System](#)

Chapter 1

Examine Your Niche And Get Free Targeted Web Site Traffic

Over the last few years the word 'traffic' in Internet grew into a huge business niche. Traffic is the blood of the Internet, traffic makes web pages of your site live: the links are clicked, subscription forms are submitted, orders on your account grow, you earn.

Even the most perfect web site without traffic is dead. Hope you did not face it with your web site, but online experience shows that you can pay for making the fanciest web design in the world, you can have amazing copywriting on the web site, you can have the cheapest price for your product or service - all this will be useless if your web site does not get TARGETED traffic.

It is **SUPER IMPORTANT** to underline "TARGETED" web site traffic. When an a person searches the Internet for gasoline discount tickets and gets to the web site that sells a vegetarian diet, will this visitor buy the diet?

Hardly!

The visitor will close the web site in about 2 seconds after web browser opened it.

That is why, if you are online, if you have a web site - fight for the targeted traffic only. You can use these traffic-wise steps to be fully prepared for getting free targeted traffic to your site.

Step 1. Define and scale your niche.

Try to get as much information about your niche as you can. The more, the better. Any product or service belongs to a certain niche. For example, the web sites that sell cars online belong to car selling niche. This car selling niche includes: car insurance selling niche, car tire selling niche, car loans selling niche, car wash, car inner design and many other car-related niches.

You see that all mentioned "car" niches are very close to each other. Some of them are bigger, others may be smaller. But there is one thing which unites all these niches - their targeted car audience. Your future targeted web site visitors.

But, before driving the customers from your niche to your web site, you have to learn your niche better. Think it over: do you really know what niche your web site belongs to? Tips below will help you to understand your niche better.

- Determine what type of clients may be interested in purchasing/using your product or service.
- Determine what products or services related to your web site can be interesting to your clients - answering this question you will find your neighbor niches (and sources of extra profits).
- Determine what additional/complementary products and services you will offer on your web site. For example, you can subscribe to a good product/service from your niche and resell it on your web site.
- Choose the offers that do not need much time and money, add something useful and dig your niche deeper.

If you have done this job honestly, you surely know more about your niche. Now you are ready to attract targeted traffic to your web site. This is where traffic building tools will help you.

Step 2. Protect yourself from typical mistakes of traffic building tools.

If you are online, you already know how huge is the market niche of traffic building tools. But this market has some typical traps. Make sure you know them to avoid these traps in future:

- Many traffic-building tools work only with one aspect of attracting traffic to web site. This usually gives poor results and low quality of traffic. Imagine that you learn swimming, and your coach explained to you how to use your hands only. Perhaps you will swim, but this will be such a hard task. So, do not rely much upon the tools that work with one-two aspects of gathering traffic.
- Some traffic-building tools are made to flood your web site with traffic. But it will be absolutely non-targeted traffic. For example, some programs give credits when their users scroll the web sites. But they just scroll and pay no attention to what is pasted on the web site. The users of these programs have to scroll hundreds of web sites to get many credit points. Will you believe that your web site will be so out-of-the-kind to attract the attention of a tired 'clicker'? Would you venture to build your online business on such clients? No! Never!!
- Finally, some traffic-building tools are cheating people. These are few, but still they exist online. You pay for traffic; they use special devices to generate false traffic from different IPs. But this is not traffic at all, computer programs generate it and flood web sites with it. This is a crime, but it exists on the Internet, so be aware.

Enough with typical traffic-building tools traps. Here come the tools that will help you to build a really targeted traffic to the web site.

Step 3. Safe and guaranteed tools for generating targeted traffic.

Today many people say that Goggle AdWords are very fine for getting targeted traffic. Well, they are really good, but they are costly. The prices in niches for good keywords are always rising.

Still search engine visitors are a highly motivated online audience. Those who submit the keyword into search engine are really motivated to find something about this keyword. If you pay for clients who type into search boxes "traffic tools" and sell traffic tools on your web site, surely Google will send you targeted visitors.

Are there free ways to get targeted traffic? Most of Internet marketers say "NO". But they USE special tools, scripts and software that automate the gathering of targeted web site traffic. And their schemes work, otherwise how could Joe Vitale, Yanik Silver, John Reese, Dan Kennedy, Jeff Mulligan, Terry Dean and many other gurus become millionaires in Internet marketing.

Their schemes are not absolutely free. They pay for certain scripts that do the entire job for them, but this is one-time payment. They buy or order programmers to make them online marketing tools, pay for these tools and earn with them lifetime. With Google you will pay every day, for every click. With your own online marketing tool you are paying only once and you can use it endlessly.

That is why, if you think about future expenses and still want to get targeted traffic, you should use the traffic building tools that have proven their effectiveness for online business.

But there is another problem. Today people have to use SEVERAL tools to drive targeted visitors to the web site and get more sales from these visitors. Using different tools can be convenient only if all these tools are professionally integrated into one web-based system. One tool helps another to give more, to work better, to promote your business.

It is great that you have now found The Free Traffic System and can see how all these tools work together for your web site in other chapters of Free Traffic Guide.

Each Free Traffic System Tool Has Its Own Strategies That Make Any Web Site Give Profits, Save Your Time And Money.

Resource Box

You now know the first step to make your online business more effective, but this is NOT ENOUGH. Learn other steps and get the tools that will help you make them more effective. The info and tools are waiting for you here

[Get Free Targeted Web Site Traffic With Free Traffic System](#)

Chapter 2

How To Find Online Partners In Your Niche And Convince Them To Send You Targeted Web Site Traffic

Every web site has a right to get free and targeted web site traffic at no cost. This is not an impossible task. All you have to do is find targeted joint venture partners and/or affiliates for your web site and give them a great offer. By offering nice partnership conditions you can convince them to share part of the targeted traffic they have to send to your web site. This method gave targeted traffic to many web sites, this web site inclusive.

From this chapter you will learn:

- what are the benefits of joint venture and affiliate partnership;
- how to find the best keywords that are related to your niche and what profit potential these keywords will give you;
- how to automate your search for top joint venture partners and affiliates in your niche;
- AND how you will get free targeted web site traffic.

OK. Look How You Can Get Affiliates And JV Partners In Any Niche.

You have to get others motivated to bring targeted visitors to your web site. This is real online magic; you turn your competitors into your allies. You and them will profit from this cooperation. Let's have a look at one example.

Imagine, you sell nice Italian shoes: the shoes are one-of-the-kind. How can you profit from other web sites that are in your shoe niche? Easy, they need more good products/services to sell their clients, you need it too. This will make you and your niche partners richer. If you sell shoes and you found a web site that sells shoeshine, you will surely find the way to promote each other. And this 'shoeshine' web site already has targeted clients, or in other words **YOUR TARGETED TRAFFIC**. Those who buy shoeshine might be interested in getting good Italian shoes: these clients are the source of your extra traffic and profits.

But How Do You Find These Niche Partners?

We'll use Spider module of Free Traffic System. This tool finds top web sites in the niche for any keyword you will submit into spider module. It automatically finds relevant web sites: you get the web site URL and its contact email. Free Traffic System can even find you the name of the web site owner, if you wish. Plus, Free Traffic System gives you the list of keywords and key phrases that these web sites used in getting to the top of search engines.

So, Free Traffic System spider gathers a base of potential affiliates and JV partners. These web sites are traffic champions in your niche. Select which web sites would be ok for getting a partnership offer from you. It can be an affiliate offer, strategies alliance (or JV) offer or anything you wish to make these web sites and their owners motivated to share traffic and possible profits from you.

Let's have a look at the example of joint-venture offer with Italian shoes and shoeshine. You write them something like:

"Hello,

My web site has the clients who might be interested in getting your shoeshine. And I see, your web site also has audience that can have strong interest to my shoes.

Would you agree if I promote your shoeshine to my clients? Would you agree to earn commissions and promote my shoes to your clients? I am ready to share profits.

If you agree, please send email to email@YourWebSite.com"

This is more of a joke style offer, but the idea is very sound and effective. If you manage to convince this 'shoeshine' web site owner for partnership, you will get targeted traffic. **High quality traffic**. Plus most of this job is automated: Free Traffic system searches and finds partners, sends them your offer, you get response from motivated partners and choose what is ok for your business.

Where To Find All These Joint Venture Partners And Affiliates?

The safest technique is to submit the keywords from your niche to the search engine, go through the first 100-1000 top web sites and contact their owners with your affiliate/joint-venture partnership offer.

This job will give you great results. As online practise shows you need to find about 5 good affiliates and/or 5 JV partners. Sometimes even one affiliate can smash your web site with targeted visitors. Just imagine, professional affiliates who have already gathered huge databases of subscribers, prospects and clients of 10,000 - 500,000. All these people are qualified to have huge interest in your niche. Would you like to promote your web site to them? Surely you would.

[Get Free Targeted Web Site Traffic With Free Traffic System](#)

Still, not only affiliates with huge client bases are important. Even if you (or Free Traffic System) found affiliates who have 100 - 1,000 targeted clients, this is a victory. This is a source of extra income. Every sale is important.

How To Convince Your Niche Champions To Share Their Traffic With You

You may think that if a web site has reached 1st page in Google, and you have only started your online business, this web site will not agree to share traffic with you.

Remember one rule that every successful online business owner knows: **If It Gives Money, It Is Worth Doing**. Even if you have zero traffic, but you have a good product or service, your chances for getting good partners are very high.

Look at the web site you want to partner with, analyze what they are selling and how they are selling it. Think how your product/service may fit into this picture. If you see that the clients of your future partner web site may be interested in getting your product/service, half of the job is done. Now you have to explain the same to the owners of this web site in your JV or affiliate offer.

Show them potential of your product/service, explain them why your product/service will have demand from their clients, give them good commissions. You can share your pure profit 50% - 50%. Don't be greedy. If they have thousands of clients, you will earn huge money even with 50% cut from your profits.

When writing an offer, be fair. Don't try to overboast or cheat. If the guys already got to the top, they are not idiots, most probably they are smart. And always show them how partnering with you will give them extra money. No matter how small the price for your product/service may be, even if one sale gives \$1 only, thousands of targeted clients will turn \$1 into thousands of USD.

Below go the things you may offer to any champion web sites in your niche:

- you write testimonial to their web site, focus on showing the quality of their offers, say that you are satisfied with their products or services AND post this testimonial on your web site;
- you put their link to your link exchange directory on the web site (if you do not have such directory, you are losing extra targeted traffic, Free Traffic System can fully automate link exchange for you);
- you promote their web site offers to your database (even if you have 15 prospects, they are potential clients);
- you can give them some educational materials about your products/services (if you are in the same niche, their clients would like to get more info on the topic they are interested in).

These are just few ideas that 99.9% of web sites would feel positive to get from you. Do it step by step. And kindly ask for some return favor for your web site. Soon you will see that these unreachable champions are **PARTNERING** with you and sharing their traffic with you.

And do not forget one important thing: Free Traffic System can save you tons of time in searching and contacting these targeted partners. Do not do routine jobs, let the software do it - this is job for machines, not for human beings :) Save you time, efforts and health for something more interesting, like getting money, for example.

After You Got Motivated Visitors To Your Web Site, Use Internet Marketing Tools To Sell More.

Learn how Internet marketing strategies and tools will help you to succeed with your online business - read other chapters of our Free Traffic Guide.

Chapter 3

Explode Your Web Site Page Rank With Link Exchanging And Get More Targeted Visitors From Search Engines

Link exchange is a very powerful technique to raise the status for your web site. Link exchange gives high web status - Page Rank - to your web site. High PR means constant flow of targeted traffic from search engines to your web site. As long as people use search engines you will be getting traffic.

The term page rank was introduced to wide online audience by Google. Today this search engine offers more than 8,000,000,000 web pages for search. Google is used by online visitors worldwide. Let's be fair - today Google is the leader among search engines. And catching up with the leader and all its users/clients is very wise.

Page rank is a kind of status that Google gives to all web sites. Page rank "0" means the lowest status, no status at all. "10" is the highest mark. It means users really flood your web site. You can pack traffic in Christmas boxes and send them to children :)

Increase Your Page Rank With Link Exchange.

Google algorithm for giving page rank checks many details on your web site. One of them is how many web sites in your niche have links to your web site. Please remember that links should be from web sites in your niche, i.e. from relevant web sites.

If Google 'sees' that relevant web sites link to your web site, then page rank magic with link exchange starts working for you. When web sites with bigger page rank (PR) link to your web site, Google also raises the page rank for your web site. The more links on relevant web sites with bigger page rank you have, the bigger are your chances to get more targeted traffic from Google.

Link exchange support looks like a cowboy western movie. Picture it: a notorious band get to the small town in the West. They say "Ha-ha. We'll do some shooting." And you are alone with a gun in the hand against the whole band; the band has dozens of people - they laugh at you. But then comes your friend with a rifle and says, "Don't worry. I'll cover your back." And then another friend, then a neighbor, his two sons, the guys from the farm, etc. You look behind and see - wow, there about 80 people who took their weapons and decided to fight on your side. The band looks for a taxi to run away - their chances are wasted :)

The same happens with link exchange. Google has no relationship with bandits, of course. But when your web site has a link exchange support from other web sites in your niche, Google awards you with high page rank. And this is a real gold mine.

How To Automate Your Link Exchange.

Link exchange is not hard: you email the web site owner in your niche, offer to exchange links, post your link on the web site of your partner, post your partner's website link to your site. And wait for Google to do its PR magic.

But when you do all these things manually, it takes much time. You need to find a proper website for link exchange, email its owner, put your link and place the partner's link, build the category of links, name them, provide description to all links for better optimization to search engines - you see, it's a hard job when you have to make 100 web sites!

Free Traffic System has a module named 'Directory'. This module automates link exchange. And it has many useful features, because Free Traffic System directory:

- builds multilevel directory with unlimited number of categories;
- builds "directory tree" (the deeper is the directory tree, the better for search engines);
- names all categories of the directory, using targeted keywords (this gives more scores with search engine robots);
- makes automatic search, editing and adding new web sites and categories to your directory;
- automatically checks if your link exchange partner still has your link on the web site;
- gives statistic reports about new users, web sites with customizable period for statistic display;
- supports AdSense and AdWords campaigns inside the directory; editing of top, bottom and side columns of the directory; supports news, forums and chats for the users of the directory.

And Free Traffic System helps you to find partners for link exchange. The scheme is shown in Chapter 2 of this guide.

Look at the examples stating how Free Traffic System directory features can motivate others to exchange links with you and give you extra traffic and profits.

Example #1.

Free Traffic System supports forum inside link exchange directory on your web site. Offer the users of your link directory to participate in forums; they will post opinions about their business niche, get more online publicity, they can even advertise something there. You will get more traffic to your web site: forum members are very sticky to web site.

Example #2.

You post relevant AdSense codes to the pages of your directory. People visit your directory, click on AdSense, you get money from Google for clicks.

Example #3.

You track what pages of your category get bigger interest with web site visitors, this will tell you what has bigger demand in your niche, and you will learn where to find more profits in your niche.

Your experience will show you more examples, but one thing is evident. Your link exchange directory can turn into a powerful Internet marketing tool that will attract targeted traffic to your web site. People will search the directory for good resources, they will read news, they will participate in forums and post their messages on forum boards.

People will not just give a 10-second visit to your site; they will return to it daily with shining eyes that seek for fresh info on your web site. Here you can do one more fair Internet marketing trick. Give your web site visitors the affiliate power: make affiliate program on your web site.

Affiliate program can help you even with link exchange. For example, you see some active directory forum users who post messages quite often and reply to the messages of other users. These people care for the info and publicity they get on your web site.

Make them an offer saying: *'Well, you already use one of my web site services. Let me share some profits with you. You register as my affiliate, drive people to the service that you are using on my web site and if someone makes purchase, you get commissions.'*

Will these people be targeted? Surely. Will the people recruited to your web site by these 'forum' members be targeted? Positively yes! So, this is your targeted web site traffic. And you do not have to sit long hours at the computer trying to convince these people to visit your web site. Free Traffic System has created a directory with forums and news.

Free Traffic System finds link exchange partners for you and sends them your offer, people go to your directory, join it and get automatically recorded to your Free Traffic System directory. This is a real power of automation!

Automate Your Online Business

With This And More Free Traffic System Tools.

Chapter 4

Open New Profit Potentials For Your Web Site With Email Marketing Tools

Email message is a real hard worker, a universal marketing servant for online businesses. Email message is multifunctional. Email is your voice on the Internet. If the web site "speaks" with a professionally set voice, using good tone - the web site gets high credibility. Emails can be a powerful advertising tool, educational guideline or eZine.

Emails can help you to advertise your product or service. Emails can explain to your purchasers how to use this product or service better. Emails can bring you ideas from your clients telling what your product or service needs to become even better.

Email marketing strategies are versatile and numerous, but to run them effectively you will need a proven and professional tool for managing email correspondence. And this is when you can face the problems.

Mailing tools can have drawbacks. These drawbacks may seem not very important at first sight. But when you start using the tools in email marketing campaigns, the drawbacks get more and more evident and depressing.

For example, some mailing tools have limit on the number of mailing lists that can be created (you can't get limited in the number of mailing campaigns!). Some tools should be installed for each web site separately which often means you have to pay for each installation of mailing tool to the new web site. Some mailing tools do not show statistic data - how can you track your work with clients, if you do not know the mailing statistics details? Some mailing tools do not allow you to personalize messages, and this is a huge step back for clients. Well, the drawbacks can be numerous.

Free Traffic System has gathered only successful email marketing experience. That is why its email module has time proven features that make every email marketing easy and effective.

Look At The Features And Options That Free Traffic System Mailing Module Has And Learn What These Features And Options Give You:

#1.

Unlimited mailing lists - you can create as many mailing lists/ mailing campaigns as you wish, you can add as many subscribers to these mailing lists as you wish, you can send as many messages as you wish.

#2.

Managing of emails from one web site - you can install the system to one of your web sites, and it will manage your correspondence for all other web sites you have. This will save money on installing mailing tool on each new web site. And this will save your working time as you will manage all emails from one place: this is very convenient.

#3.

High personalization of email messages. Professional mailing tools should have a large list of macros elements: web site name, mailing list name, date of user registration to mailing list, first and last name, user's email, subscriber's date of birth, country, state, etc. Free Traffic System supports 20 macros elements. So, you will be able to customize your messages, and your clients will feel the real personalized approach to them. Clients like when someone cares about them.

#4.

Support messages in HTML and TXT formats. Your emails must reach their possible receivers, better in various formats. Well, HTML looks more attractively, and TXT is rock solid to be opened on any computer. You choose any format and make email messages.

#5.

Testing and previewing all messages before sending them. These features help you to prepare and check your message better and only then to email it other people. Any email should look proper, pretty and catchy. The eye of a reader must easily find necessary elements in your text. Preview the message, arrange it to look more appealing, preview again, send test message to your email, work, work, and work until you get fully satisfied with your email message outlook. Only when you are sure that your email looks the way you like it, then you can send it.

#6.

Attachment of files to the messages. Very often it is vitally important to attach files with special reports, or portfolios with pictures about your recent presentation, or application forms. Now you do not need to paste them into the email. You just attach the files in necessary format to the email and your clients will get it. Attachments can break horizons for your email marketing.

#7.

Ready-made message templates. Sometimes they say that templates are for lazy people. This is not true - templates are for those who want to save their time and still get a good-looking result. Free Traffic System gives you newsletter, eZine, business letter, advertising letter and other templates to save your time and provide you with quality materials for effective email marketing campaigns.

#8.

Possibility to send one message to any mailing list(s) that you choose. You create email message, then just tick the necessary mailing list(s), and the message you made is automatically sent to the subscribers of all mailing lists you have chosen.

#9.

Queue message sending. You can set the date when the message should be sent, and Free Traffic System will automatically send necessary messages on necessary dates. You can leave the office, go on a business trip, or you can even go on a vacation, when the time for sending comes, your message will be sent to necessary email addresses. With queue sending feature you can plan your email marketing activity even 10 years ahead. Queue the messages in a sending schedule, and Free Traffic System will do this job for you.

#10.

Detailed mailing statistics. You can see how the list of your email subscribers grows, who joined and when or left this or that mailing list. Free Traffic System shows the life record of your email marketing - this is very important business info.

#11.

Subscribers' management. Free Traffic System gives possibility to add new subscribers, edit profile of existing subscribers, delete the profile, filter and search the subscribers in mailing list base. Free Traffic System allows you to transfer (import and export) the subscribers from one mailing list to another or save the subscribers' database in a special file.

#12.

And, emails can be TRACKED. Using Free Traffic System tracking tool you can see how many clicks were done on this or that email. You see how many people exactly responded to the offer in your email. Tracking gives you a real picture of your business.

Example Of How One Email Marketing Strategy Can Help Your Online Business

Let's say you are selling a bundle of offers on your web site. You wrote an educational course for your web site visitors. Web site visitors submit their name and got emailed to a web form. After subscribing to this course (free course, this is almost obligatory). Every day your visitors get a new email message telling them about the benefits and advantages of one of the offers you sell.

If you sell 5 offers, this means your visitors for 5 days will get info about your product/service. This course advertises and gives your visitors more and more info to motivate them for using this or that offer.

Plus, you add few tracking links into each day of your course. One of the links may say 'if you have questions about this offer, click...' or 'if you want to suggest other ways of using this..., please click...'

You will see what offers bring more questions. With these questions you will see the strong and weak points about each of your offer: your readers will help you to find them. Maybe they will suggest something interesting about this offer - a new strategy to use, a new potential for profits, maybe much more.

Plus in each of the days you can give your reader an option to get discount for THIS VERY OFFER by clicking a link. Thus, you will know how many people are actually ready for a sale on your web site, just want to get a lower price. And you will see what offers get bigger demands when sold separately.

One important point - Free Traffic System automates all this work. All you need is to write 5 days of simple text (hire a ghost writer or do it yourself, you know your offers and their benefits). The sending, getting response from your reader, recording the statistic data: who and when replied, what link in the email was clicked, did it give you sales or not - everything will be handled by Free Traffic System.

And now analyze this example. With simple line of 5 emails you have established a real contact with your web site visitors, you will get feedback from them, you track your business, you motivate them. All this happens automatically.

All you need is start using the mailing module of Free Traffic System with all its features and options to make mailing strategies work for you and the success of your online business.

Learn More About Mailing, Client-Catching And Tracking Strategies That Every Online Business Needs.

Make sure to read the next chapter of our Free Traffic Guide to get the complete picture of an effective online business.

Chapter 5

How To Catch Visitors And Motivate Them To Return To Your Web Site Everyday

Online statistics shows that only about 10% of online visitors make immediate purchase on the web site. Other 90% of visitors may leave your web site forever, without making any purchase. Do you want to lose 90% of web site visitors that you got to your website with so much efforts? No!

Internet marketing has a time proven strategy to catch visitors on your web site and transform them into loyal clients. This is where an autoresponder will help you. Autoresponder is very similar to a mailing list. But its aims and functions differ.

Mailing list is used to send the messages to its subscribers; autoreposnder GATHERS subscribers and sends them special messages. It can be one message, or a line of 10 messages sent day after day, you choose. Let's have a look at one example which will show how autoresponder turns visitors into buyers.

Let's say, you are looking for university scholarships. You get to a web site with scholarships which requests to pay a small fee for registration to the program. Maybe right now you are not ready to make payment, just do not feel motivated for it, but still you are interested in the offer. Usually you would leave this web site.

But, stop, you see an appealing pop-up window or subscription form saying something like, "Sign up here to get free and fresh updates on new university scholarship programs, bonus programs and admission requirements". Surely you subscribe. If you are looking for university scholarships, you will be motivated to learn fresh updates about scholarships.

So, you start getting useful info on a weekly basis. Then you get a message which says *'Now you can ... (here goes an amazing offer), but you have to apply within a week.'*

You are ready, you know all the benefits of the sholarship, you got it real close. You rush to application form, pay the fee and go on.

This is how an autoresponder with its mailing materials turned you from an averagely motivated visitor into a client. Autoresponder made you pay the fee. This is one marketing benefit that autoresponders give. But there are more benefits.

When every person submits name and email to autoresponder subscription form, this name and email are saved in autoresponder mailing list. It means that the autoresponder automatically gathers a database of targeted visitors that have shown interest in your web site and its offer(s). The most important rule is to give something 'catchy' in the subscription form and this 'catchy' offer should better be free.

Think it over. What can you give on your web site for free so that your visitors will have no doubt in putting in their names and emails? Usually a package of good info, or bonus, or discount, demo trial would work fine. You will be amazed how your client base will grow with this tool. It is like putting at shop's entrance door a person who will kindly ask all clients to give their name and email with a return of small discount for giving their info.

Of course, the shop owners would like to know who exactly their potential client is. Now that you believe that autoresponder is a powerful Internet marketing tool, read more hints revealing how you can make money with it.

Different Ways To Make Money With Autoresponders.

With autoresponder you can:

1. **Sell your own products and services more effectively.**
2. **Get more re-orders from your clients** - if you sell something which needs ordering from time to time (health products, movie tickets), the autoresponder will keep you in touch with your clients.
3. **Generate more upsells** - if your products/services have updates and upgrades, autoresponder will help you to motivate clients for buying the update or upgrade.
4. **Create cross-sells** - you can sell any complimentary products and services that have any relation to the major offer on your web site. Thus you give a bigger collection of offers, help your joint venture partners to make more money with you (they can offer their products/services). And you have all rights to ask your partners for the same favor: sell something on their web site. In any case, you make more money.
5. **Recruit and train affiliates** - autoresponder is a perfect tool for educating and motivating your subscribers. They get more info with each new message, and you increase your web site credibility.
6. **Ask for feedback from your clients** -make it a usual practice to ask your clients regularly what they need from your web site. You can not even imagine how many good ideas they will give you for free.

7. **Minimize refunds** - when your customer gets more and more info that explains the real benefits and advantages of the offer bought from your web site, this client has less and less desire to ask for his money back.

Among other modules, Free Traffic System has also autoresponder module which is integrated into the system, AND...

Free Traffic System Autoresponder Module Opens Huge Potential For You And Your Online Business:

- you can create unlimited number of autoresponders;
- you can add new autoresponders or edit the existing ones;
- you can choose and set up the mailing list to save the subscribers of your autoresponder (the system will save new subscribers to any mailing list you wish);
- you can program autoresponder by days, scheduling the program to send its messages with any time interval you wish;
- you can make autoresponder messages in TXT and HTML formats, and add attachments to them (audio or even vide files);
- you can use a huge collection of macros elements to highly personalize your autoresponder messages;
- you can get full statistics about sent messages, new subscribers, unsubscribed users of autoresponder;
- you can import and export the subscribers to any base, or save them in a separate file;
- you can add tracking links inside autoresponder messages and track what response your autoresponder gets.

The benefits of using autoresponder are evident: you do not lose visitors from your web site, you grow your base of subscribers and clients, you motivate your subscribers and clients. Plus, autoresponder automates the whole process of gathering the names and emails from your subscribers, saving them into a database, emailing them under the set delivery schedule, transferring the clients from one base to another, etc.

And one more important benefit of autoresponder - this tool shows great potential for combination with other tools, like URL tracking, pop-up windows and other tools.

Learn How To Use These And Other Free Traffic System Tools And Get Traffic And Profits For Your Online Business.

Resource Box

Autoresponder discovers bigger potential when used together with other Internet marketing strategies and tools. Want to know what strategies and tools give real power to autoresponder? Click this link [Free Traffic System](#)

Chapter 6

Visual Psychology Tricks In Online Marketing

Visually web site is a very specific product: it is static. Do not take word 'static' in its direct meaning. The graphics in banners or headers can move, there are flash presentations that also give huge dynamics to web site, when you click links the web pages change - but the structure of a web site is static, and this is the way it should be.

Just imagine how difficult it would be to navigate the web site if every web page changes every time you load it. Half of the time you would spend, on looking for a proper link or button to click.

So, let's agree that structurally web site must be static. There is a wise trick how you can benefit from giving something new to this static web site picture.

Psychology says that everything which gets out of the line of usual, common, routine things - attracts attention. Imagine that you are walking down the street among a crowd of people dressed in grey clothes: suits, jeans, T-shirts, whatever. And then somebody in light red suit appears. Will your attention be triggered to this person? 100% YES! This is visual psychology. Something unexpected, out-of-the-line appeared and your eye got stuck to it.

You can use the same trick with websites. But this time do not play with colors, you can play with static web site picture.

Look how it works. Your web site is on display: the banners blink, text fits into the design, everything is looking good and pretty. And then something unexpected appears. It grabs the attention of your web site visitors and bashes them with something terrific inside. Any offer presented in this way has great potential for being clicked on.

Today there is a ready made Internet marketing tool which can do it for you. This tool is called pop-up window. Yes, that tiny thing which pops out when you enter a web site. Some people feel pessimistic about pop-ups: they say pop-ups do not work today.

They give no effect to the web site, they do not bring any traffic, just distract the attention. This myth is partially true: old-fashioned pop-ups do not work. Modern pop-ups have advanced much further: today they give fresh look to the web site. Who can say that pops-ups do not work if famous Internet marketer (Corey Rudl) reported to **make \$2,064,000 in 2004 with a pop-up window?** This is about **\$5,600 daily!** Do you still think pop-ups are not effective? Maybe it is time to learn how others make real money with them? Yes, it is the very time to learn.

And we should start from figuring out the difference between old and new pop-ups. This will help to explain why modern pop-ups are so useful for any online business. The old pop-ups were a real natural disaster. They always popped out, distracting you from web sites. Some web sites even used multiple pop-ups: imagine you get to a web site and then 5-10 pop-ups appear on your screen.

This is not marketing, it is torturing! No wonder that the producers of web browsers decided to stop this "pop-up tragedy". They made special functions for their browsers to recognize the pop-ups and block them. It was a saving step for Internet users. But it was not the end of pop-ups.

When something has a sound idea (and pop-up idea is very interesting for marketing), it will not disappear. That is why pop-ups were reinvented. The changes were really favorable.

First of all, they started looking like a real picture which shows the professionalism of web site owners. Today they can look like a real object that favorably attracts attention. Pop-up can look like a huge present box, a book, a tiny notepad letter - anything to catch the attention of your web site visitor.

Psychologically pop-up window has great marketing potential. These windows get out of the visual line that all other web site elements have. Your web site visitors will surely notice this window. So, the most important thing is to put a good offer - irresistible offer inside this pop-up and the psychological effect will trigger your visitors to click on pop-up links.

New age pop-ups have many useful features that make them a more effective Internet marketing tool.

Free Traffic System Has A Module That Generates Pop-Ups, Giving You Full Freedom In Work With Them:

1. **Pop-ups are highly customizable** - you can set the parameters for pop-up window: height, width, left or right positioning on the web site page.
2. **Pop-ups have different algorithms for moves** - they can appear, floating from left, right side, from the above and from the bottom and also go away to the left and right side, to the bottom and to the top.
3. **Pop-ups have a collection of ready-made templates** - you can save time by using an appropriate pop-up template, and you can edit the template or create your own template.
4. **You can easily edit the content inside the pop-up** - if you need to change the text inside the pop-up, you are free to submit any text you wish.

5. **You can preview pop-up window with a special test option** - so you do not jeopardize yourself with making a bad looking pop-up. Test it and make changes until pop-up looks perfect.

6. **Pop-ups are not blocked by web browsers** - your pop-up window enjoys absolute freedom for its web publicity, and you do not lose potential clients, because of web browsers that block your pop-ups.

Why Should You Use Pop-Ups On Your Web Site?

Pop-ups give the illusion of activity to your web site. Your visitors get a feeling that something is going on, on the web site. Action brings more action and gives action to your visitors. You just have to drive these actions into necessary clicks on your web site.

Pop-up window is a perfect tool for combining with autoresponders. At first pop-up catches the eye of your web site visitors. Then they start reading the text inside the pop-up (tips and tricks, educational info, special discounts, countdown demo offer, etc.) They submit their email inside the form in the pop-up window and autoresponders save clients info in the base of your clients and starts automatically sending them useful info.

Pop-up can work as a tool for qualifying the "targetness" of your audience or as a tool for getting feedback/response from your visitors. You can ask different questions in the pop-up body - people tend to answer, when they get such a special kind of direct virtual questions. For example, you ask in a pop-up 'How did you find my web site?' and give a number of answers. People will tick the matching answer or will submit some words into a pop-up form. This will tell you where your visitors are coming from - very useful marketing info.

Or you can ask your visitors to set the price for your product/service. Write inside a pop-up something like 'How much are you ready to pay for my roduct/service?' and give them several price options and a small field for comments. This trick will help you to find new things about the price limits for your product/service. The info from these comments will explain what your clients think of when they think of buying your product/service.

Free Traffic System Gives A Chance To Combine Pop-Ups With Other Successful Internet Marketing Tools In One Web-Based System.

Chapter 7

How To Track Your Online Business, Stick To Profits And Eradicate Losses

When you work with web site traffic, you must have the tools that will show you the real picture about this traffic. You must know for sure if you get targeted visitors or non-motivated web surfers. You must know what your web site visitors want, what offers they like more, what offers cut down their motivation to use your product/service.

Only professional URL/link tracking tools can show you the real picture of your online business. And those who do not want to see real picture, are setting up their business to a great risk of losing everything.

How Tracking Works.

This is not difficult at all. You create a special link and put it inside your copy, mailing message, autoresponder letter, pop-up window, web page - anywhere you wish. This link has special 'counter' that is activated every time someone clicks it. You get statistic information about clicks on any of your links, you see the response that your business gets with clients, subscribers and web site visitors.

A simple example will show how URL tracking can help you to qualify the motivation for your products among subscribers. Let's say you have 3,000 subscribers in your car driving tips' course. Using URL statistics, you can see how much clients exactly are ready for special action with your web site.

You write email letter to your subscribers, saying:

"bla-bla-bla. You are my subscribers. I have terrific car related offers for you..."

Then you place several trackable links with text:

**"...Click this link if you want to get discounts for car wash:
<http://www.YourWebSite.com/link1>**

**Click this link if you want to get car insurance:
<http://www.YourWebSite.com/link2>**

**Click here if you do not have a car and want to get loan for car purchase:
<http://www.YourWebSite.com/link3> ..."**

This example is simple, but I hope you can get the idea. People will click on links they feel interested in. You see how many click were made on each link and know:

1. How many people from your list have a car (link 1 + link 2)
2. How many people from your list do not have a car (link 3)
3. How many people from your list are interested in lower prices car wash services (link 1)
4. How many people from your list need new car insurances (link 2)
5. How many people from your list ignored all your offers (3,000 - link 1 - link 2 - link 3)

This info is very useful. For example, this test showed you that 2,600 out of "your" 3,000 subscribers did not click any of the links at all. Then you should think it over, maybe you do not have a car targeted traffic. Maybe the course info is not interesting and people do not read anything that is sent to them. Maybe the traffic you drove to this course was not targeted for cars: they just submitted their name and email hoping to find something exciting and lost their interest.

Want to know real answer to these questions? Make another tracking campaign and links will give you the answer. That was an example of URL tracking aimed at qualifying the subscribers into different groups by their interest. But tracking can give more useful info about your online business.

With a simple link tracking technique you can check what variant of your ad copy is more effective. Write two ad copies that will differ in some copywriting elements. Put two different links in these copies. Run copies in advertising and track both links. You will immediately know what ad copy gets better response.

No hypothetical suggestions, only real facts and numbers. The same link tracking technique can be used to know what discount scheme works better with your prospects. Give several variants of discounts, track what discount gives you better response and stick to this scheme of discount.

Universal Tracking Technique:

As you could see from the example above, link tracking technique is universal. You can test different variants of texts, offers, products and services and see what works and what does not. This technique is called split testing in Internet marketing. You make several variants (i.e. split your offer into several testing variants) and see what variant gets better response. Then you choose the variant that works better and stick to it, doing more and more split testing to get a better result from your web site.

So, universal link tracking technique works like this:

1. Split and track.
2. See what variant gives better results.
3. Stick to things that give profits, eradicate what gives losses.
4. Track again (see point 1 and go further).

This tracking technique is absolutely universal. You can use it for finding the most effective ad copy, price level for your offers, discount type and level, sales copy, banner, type of educational info - everything you wish. And this technique will show you what really works fine and what is just a waste of time.

Free Traffic System gives you a convenient way to track links, because its tracking module has all you need to track links professionally.

With Free Traffic System URL/Link Tracking Tool You Can:

- create and test as many URLs as you wish;
- make two types of tracking links: HTML and TXT links;
- edit and customize your URLs;
- view link statistics to see tracking details: when the link was clicked, how many times it was clicked, how many unique clicks were made, etc.

These features turn link tracking tool into a very powerful Internet marketing machine. It will find problem spots in your online business. Plus link tracking will show you what areas of your online business have big profit potentials. Increase this potential, grow it and turn into real profits.

Link tracking gives you real picture of what happens with your web site. You are prepared, which means you are at full force long before problems will start to appear.

Chapter 8

How To Make Your Web Site Always Updated To Most Recent Demands Of Online Market And Make More Profits

If you have any experience of work with your own web site, then you know how many changes on the web site must be done regularly to meet with new demands of Internet marketing. Sometimes these changes may be tiny, like adding some keywords to your text, or change the headline of your article, or erasing one symbol. But if you are not a programmer, you cannot do it./p>

Actually this is not true. Even a person without programming knowledge can make changes on the web site. This can be done with the help of a special web site tool - content manager or content management system (CMS).

Before speaking about content management, let's clarify what is content. Content is not only text on your web site: the links on your web site are content, the pictures and images are content, the buttons, meta keywords and descriptions are also content.

Content management system allows to make changes to any type of content on your web site. It is not difficult. If you have ever worked with any text editing program, then you can say that you have already worked with content management system. Nurses, school teachers, bus drivers and construction workers can use content management. Make the changes in content of their web site, click 'Save' button and the system automatically will make all necessary changes on the web site.

Free Traffic System has a professional content management system module. You can do almost anything you wish with your web site content, using this module.

See The Features Our Content Management System (CMS) Gives To Its Users.

1. CMS allows you to change the style, font size, color of the text; plus it makes underlining, bold and italics of the text possible.
2. CMS can adjust the text by center, right or left side; create the lists with bullets, numbers or tabulation gaps.
3. CMS allows you to apply any background color you wish to any text.

4. CMS can insert pictures to the web site.
5. CMS gives possibility to put links on web pages, bind these links to necessary URLs.
6. CMS can create tables with customizable number of rows, columns, their size, etc.
7. CMS has an option to switch the content of web page from visual mode to HTML code mode. Those who know HTML can edit the content in the code.
8. CMS allows to work with meta keywords, descriptions, title, etc.
9. CMS has usual "cut and paste" functions which makes the work with is easy and convenient.
10. CMS can manage all the web pages separately, without installing the system to each page.

If you are not a professional programmer, content management system is a perfect tool for you. Only content manager can turn your web site into a living online organism that quickly responds to the latest demands of the market. The web site that follows the most successful online trends gets the best traffic, both in terms of quality and quantity.

Let's have a look at one example from an online business. The tracking tools showed that your new sales letter has better effect upon reader. You need to change part of the text on order page. You go to content management module of Free Traffic System, copy and paste this text into a special window and your web site is updated with new text. Your order page will work better and generate you more sales.

Another example, you scan your web site with a special tool that shows how optimized your web site is to the requirements of search engines. This tool gives you instructions: this keyword must occur more often, too much text here, too little text on this web page.

You have a fast solution on how to do it. You open content management system, open the necessary pages and do corrections. All the rest is done by the content management system. Job is done, web site is search engine optimized, targeted visitors come to your web site - perfect results!

One more example, you have an affiliate web site where you promote products and services of other web sites. Today you found a terrific offer; you are 100% sure that your subscribers will get crazy about it. You want to start earning from it immediately. All you need do is paste their banner with your affiliate link on your web site. This is simple. You do cut'n'paste magic and content management system puts the banner on your web site. Your subscribers click on the banner, they are satisfied, you get commissions with a happy smile on your face.

Content management system is your wheel for online business. See a good road, turn the wheel and go for it.

And now have a little rest, before reading the last 9th Chapter of Free Traffic Guide. Because it will tell how to use all most effective Internet marketing tools together and grow your business to the online empire with huge profits.

Chapter 9

Universal And Time-Proven Step By Step System Of Getting Targeted Web Site Traffic

Though each web site is different, it is possible to build a universal plan of actions that will bring you free targeted web site traffic and convert it into more sales.

This plan of actions can be split into three stages:

1. Getting Targeted Traffic
2. Growing The Client Base And Getting More Sales
3. Adjusting Web Site To Current Online Market Requirements

So, let's briefly cover all the stages.

Start Up - Getting Targeted Traffic

Step #1.

Run the Spider in Free Traffic System to find joint venture partners and affiliates for your niche.

Step #2.

Run Spider for the search of emails and names of your partners and affiliates.

Step #3.

Write them a joint venture or affiliate offer. Use Mailing List of Free Traffic System to automatically email this offer to affiliates and joint venture partners that Free Traffic System found for you. You can use the template letters to make a good-looking offer for your clients that the Spider has found for you.

Note: Affiliates and joint venture partners will make a great job for you - they will bring targeted users to your web site and advertise your offers for their clients or for targeted online audience. Make sure you offer them good terms for them to cooperate with you. The more motivated they are to work with you, the better they will work to give you targeted web site traffic or advertise your offers.

Growing The Client Base - Getting More Sales

Step #4.

Set up link exchange directory. Try to exchange links with web sites that have a bigger page rank and are in a niche related to your web site. Use Spider and the Mailing List to find and contact link directory exchange partners. Use Directory module to set up the directory and all its elements.

Step #5.

Use Autoresponder to convert web site visitors into prospects and clients. Do not lose any web site visitor. Free Traffic System works hard to get them. Drive the visitors to Autoresponders, educate and motivate them to use your offers, grow your client base.

Step #6.

Convert traffic into sales. Use Mailing List, Autoresponder, and URL/Link Tracking of Free Traffic System to raise the effectiveness of your offers. Check what offers give better response, use them more, improve them - work with your clients. Let them feel your personal care about their needs.

Keep Your Web Site Fit To Current Online Market Requirements

Step #7.

Check what gives money and what gives losses. Use URL/Link Tracking, check what strategies, ads, web page texts, online campaigns give nice results - stick to them. If you see that something gives losses - eradicate useless efforts.

Step #8.

Make necessary changes to web site. Once you find out that any element on your web site needs changes, effect the changes immediately. Use Content Management System of Free Traffic System to achieve this. Save the changes and enjoy new look of your web site.

Step #Last.

Test, test and test! This is not a new suggestion, but a very important one. As you can see, this scheme can be applied to any web site. The steps are not detailed, but now you can see that this online business architecture is logical. We can tell you even more: it is effective and very practical.

Make sure to read all the chapters of our Free Traffic Guide to get into more details of different Internet marketing strategies that Free Traffic System can automate for you.
